

5.5. Consumption study according to recipes

December 2.019

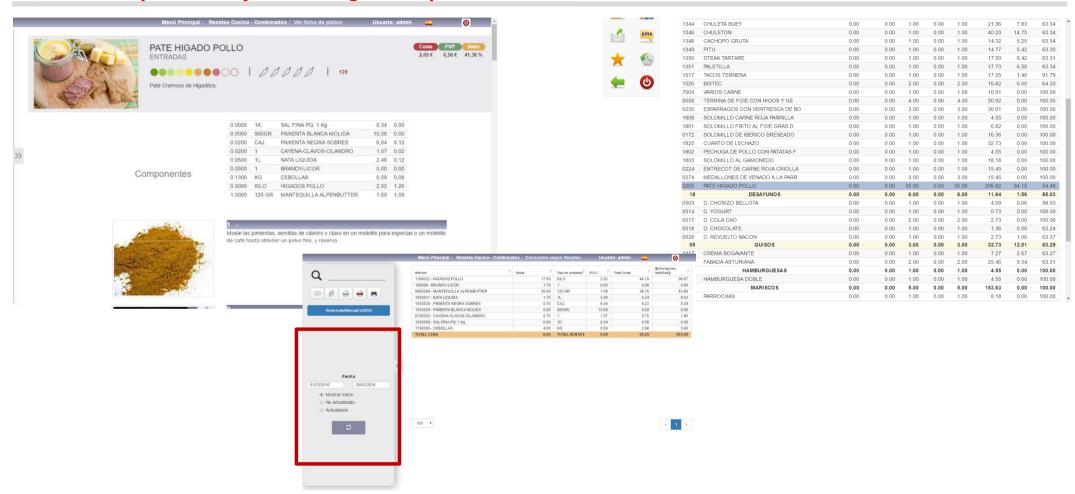

#### **EVERY TIME WE MAKE AN ORDER OF A DISH, ITS COMPONENTS ARE CONSUMED?**

The answer is NO, it is clear that a unitary cost evaluation does not mean anything if it is not in a set. StarEcon has two options for the perfect answer to the initial question

The cost evaluation and their consumption are "more" correct if they are analyzed in a period, that is, based on the different compositions of all the dishes, from one period to another, which gives us what we would call THEORETICAL CONSUMPTION, in the first place we can obtain it simply by the section CONSUMPTION STUDY according to RECIPES, in which we are required to study the THEORETICAL CONSUMPTION

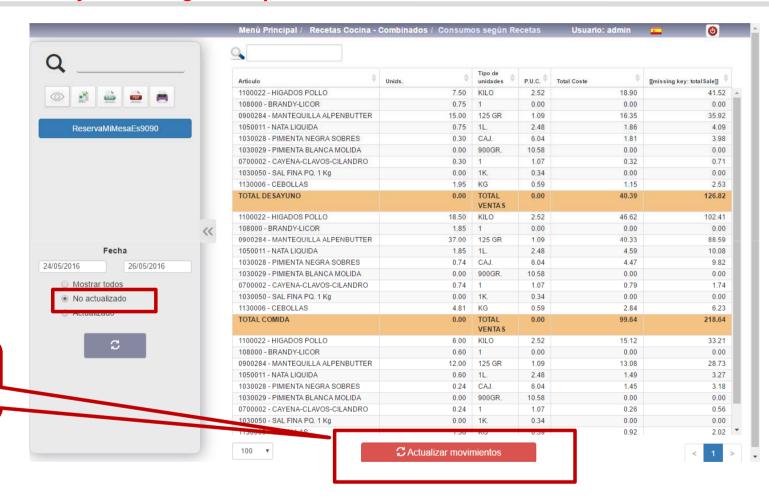

#### 5.5. Consumption study according to recipes

#### 5.5. Consumption study according to recipes

If we press NOT Updated and

We can make him give us

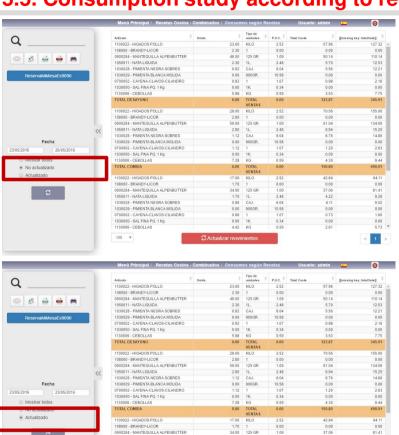

as output everything that

appears on the screen

Update Movements

#### 5.5. Consumption study according to recipes

When you click on update, it marks us already in ORIGIN Restaurants, that the consumption of these dishes has been made, as in the DESTINATION WAREHOUSE, it generates the corresponding consumption.
