

Why don't I match the final stock with the one in
Articles?

Why don't I match the final stock with the one in Articles?

FAQS

client:

In the option .6.2., or in the Items tab, it does not match the stock with what we actually entered, transferred, ...

solution:

By external causes it could have caused that it was left without updating correctly, passing the utility G.7. Recalculation of Stocks would be solved

You can pass this option directly and the stock will already be square in all the Departments.

Main menu / Utilities / Recalculate Existences

User: admin1

This option calculates the existences of each article in each department going through the movements file to make it consistent.

 Recalculate Existences
