A.2. Rooms File

Class One

The screenshot displays the 'Rooms' management interface. The 'Room Features' tab is active, showing a table with columns for Room, Pax, Price, Rooms, Tax type, and Account. A red box highlights the 'Room Features' tab and the 'Rooms' button in the left sidebar. Another red box highlights the 'Fotos' (Photos) section, which includes a 'Localización' (Location) map and a 'Galería' (Gallery) of room photos. A third red box highlights the 'Room Features' table, specifically the 'Room' column. A red line connects the 'Room' column to the floor plan diagram below, pointing to 'Hab. 15' (Room 15). The floor plan diagram shows a hotel layout with a 'SEA' (Sea) area and a 'SWIMMING POOL' area. A red box highlights the 'Hab. 15' label on the floor plan.

We must give the numbers of rooms that are possessed of every type. Also we can include in every room a description of the same one, its characteristics, and photo of the location as photos of the proper room, the motive of this type of information is that in the module IQCS (Interface with the Client), there can be chosen the room in which it is going to be lodged and the situation of the same one inside the hotel.

We can define different characteristics of the Rooms. It will do us good to do filters in the booking

There is in different parts of the program in which the rooms appear for Allocation Order

In IQCS it is also important so that the client could choose, since option will happen of "n" without cost and "m" with a light supplement "upselling"

A.3. Lounges File

Class One

A Lounge does not stop having a “very similar” treatment to the Rooms.

In this paragraph it is where we create a series of **Fictitious Rooms** for:

- ❖ To be able to divide in several accounts an invoice of a client
- ❖ To be able to defer both our and external Overbooking
- ❖ To be able to have fixed CLIENTS accounts, for example that are not lodged in the HOTEL (The company that needs a series of services – meals, ..., and pays in order month
- ❖ etc

The screenshot displays the ClassOne software interface. The main window is titled 'Master files / A.3. Halls file'. It features a search bar and a table with columns 'Code' and 'Description'. The table contains one entry: 'HF' with description 'HABITACION FICTICIA'. A dropdown menu shows the value '25'. Overlaid on this is the 'Edit Hall' window, which contains fields for 'Code' (HF), 'Description' (HABITACION FICTICIA), 'Pax' (1), 'Price type' (P - Price/pax), 'Rooms' (22), 'Tax type' (1 - 21.0), 'Account' (70000001), 'CAD income', and 'CAD dept.'. Below the 'Edit Hall' window is the 'Rooms (HF)' window, which has a table with columns 'Room' and 'Remarks'. The table contains four entries: '900 EXTRAS DEL DIA', '901 TUI', '902 ACUARIUS JANDIA', and '903 HF OCUPACION CLIENTES'. The 'Room Features' column is empty for all entries.

Information of the provinces with its corresponding codes so that we could do the statistics of the INE.

In the resolution of October 5, 2007 its announces the obligatory nature of the monthly mailing to the National Institute of Statistics (I.N.E). of the questionnaires of the survey of occupation in the hotel establishments.

When the traveler is native of the Spanish State, there will not be specified the code of the country, but the PROVINCE of the traveler, according to a table of codification NUTS III included one in the Annex 4 of the resolution. And so, if the traveler is native of the province of Pontevedra, instead of the country code, there will be specified the code of the province, which in this case, is the ES114.
