## Roundings and Tips

August 2018

## Roundings.

Some determined countries like Canada, Sweden, Hungary ..., in which the hundredth ones are not used in the payments of counted. Also the case happens in CashDro that the same problems exists with the coins of 1 cent. This one operative has several implications and in Class One, on having been quite absolutely controlled in the same way, this peculiarity is controlled.

First of all it is necessary to indicate to which concept applies the above mentioned amounts (plates), since a strict statistics of the same ones will take and as second which component is the minimal unit of rounding (2 cents, 50 cents or 1 euro)

## Tips

In many countries the USA, Canada, GB, ..., on having paid with credit card for the TPV (EPOS), or enclosed from your own phone they can propose to you to leave a tip to the bartender.

This tip even is LET'S SAY "ALMOST OBLIGATORY, USA between 10 – 15 %, Canada 15 – 18 – 20 %, ...).

If we it want to be right it is necessary to include even in the invoice of the proper client like the fulfilled one (WITHOUT IVA/TAX/TVA ...), and this way it will fit perfectly with fit of box, accounting, etc, although it is true that the above mentioned concept **accounting** must not go to any account of sales but to an account of remunerations dependent on payment (share-out of the trunk, ..., 465 ...)

Even the circumstance happens in some countries that include it in any form of payment, as it is the case of Hungary, Brazil (included service)
